

WCS Platform — App Store Review Reply

Resolution Center response · Guideline 3.1.1 (In-App Purchase)
Resubmission build 1.0 (11) · Prepared May 31, 2026

Hello App Review Team,

Thank you for your prior guidance on **Guideline 3.1.1**. In build **1.0 (11)**, we have **removed Apple In-App Purchase entirely** from the app.

Summary of changes

- **WCSStoreKitSubscriptionManager** deleted — no StoreKit 2 product loading, purchase, restore, or entitlement sync.
- **Membership & billing** no longer shows SubscriptionStoreView, Restore Purchases, or IAP badges.
- Screen now shows Plan overview, optional hosted checkout (external, labeled), and organization/investor B2B links only.
- Profile removed “Get Premium with In-App Purchase” upsell; premium follows server-side records.
- All StoreKit imports, product IDs, and IAP telemetry removed from Release builds.

How to validate (reviewer path)

- Launch app → open **Profile** tab.
- Tap **Membership & billing**.
- View **Plan overview** (Free Audit and Pro descriptions).
- If configured: **Subscribe now** under Upgrade to Premium opens external hosted checkout (Stripe).
- Organization & investor procurement links appear only when env-configured (B2B, labeled).
- Return to **Programs** — access follows free-tier or server entitlement gating.

Compliance

- No consumer digital content sold through IAP; StoreKit is not used.
- External links are user-initiated and labeled for B2B procurement only.
- No in-app card capture for consumers.
- Admin AI Course Studio is optional (admin-only; not required for review).
